INSTALLATION GUIDE

Fitting the bottle or frame battery

For batteries that are mounted on the frame in place of the bottle cage.

In the box

- Battery
- Mounting rail
- Mounting hardware

What you need

- Allen keys 4 and 5 mm

Safety first
Disconnect the battery before working on cables, the controller or the motor. Make sure the bike stands firmly, preferably in a work stand. In doubt? Have the installation done by a bike shop or a Van Beijck dealer.

Step by step

1. **Remove the bottle cage**
   Remove the bottle cage(s) from the frame.
2. **Fit the mounting rail**
   Place the rail on the existing screw holes of the bottle cage.
3. **Fix the mounting rail**
   Fix the rail firmly with the supplied hardware.
4. **Fit the battery**
   Slide the battery onto the rail and check that it locks properly.
5. **Connect**
   Connect the battery's plus (+) and minus (−) to the wiring. Extend the cables if needed to reach the controller. Is the controller in the rail? Then connect the remaining cables (motor, display, sensors) now as well.

Check after fitting

- ☐ Rail is firmly fixed
- ☐ Battery locks properly
- ☐ Plus and minus correctly connected
- ☐ Display switches on
